Forest Ecology and Management, 69 (1994) 345–346
Elsevier Science B.V.

Author Index

Amateis, R.L.
An approach to developing process-oriented growth and yield models 7
Araújo, M.C., *see* Tomé, M. et al.
Bossel, H. and Krieger, H.
Simulation of multi-species tropical forest dynamics using a vertically and horizontally structured model 123
Brzeziecki, B. and Kienast, F.
Classifying the life-history strategies of trees on the basis of the Grimian model 167
Burk, T.E., *see* Sievänen, R. et al.
Cattelino, P.J., *see* Zhang, Y. et al.
Ceulemans, R., *see* Chen, S.G. et al.
Chen, S.G., Ceulemans, R. and Impens, I.
A fractal-based *Populus* canopy structure model for the calculation of light interception 97
Desanker, P.V. and Prentice, I.C.
MIOMBO — a vegetation dynamics model for the miombo woodlands of Zambezian Africa 87
Desanker, P.V., Reed, D.D. and Jones, E.A.
Evaluating forest stress factors using various forest growth modeling approaches 269
Dhôte, J.F.
Hypotheses about competition for light and water in even-aged common beech (*Fagus silvatica* L.) 219
Eckersten, H.
Modelling daily growth and nitrogen turnover for a short-rotation forest over several years 57
Furnival, G.M., *see* Valentine, H.T. et al.
Gale, M.R., *see* Zhang, Y. et al.
Goulding, C.J.
Development of growth models for *Pinus radiata* in New Zealand — experience with management and process models 331
Hinssen, P.J.W.
HOPSY, a model to support strategic decision making in forest resource management .. 321
Impens, I., *see* Chen, S.G. et al.
Jones, E.A., *see* Desanker, P.V. et al.
Jones, E.A., *see* Zhang, Y. et al.
Kienast, F., *see* Brzeziecki, B. et al.
Koop, H. and Sterck, F.J.
Light penetration through structurally complex forest canopies: an example of a lowland tropical rainforest 111
Krieger, H., *see* Bossel, H. et al.
Krieger, H., *see* Schäfer, H. et al.
Larsen, D.R.
Adaptable stand dynamics model integrating site-specific growth for innovative silvicultural prescriptions 245

Liechty, H.O., *see* Zhang, Y. et al.
Ludlow, A.R., *see* Valentine, H.T. et al.
MacLean, D.A., *see* Steinman, J.R. et al.
Mohren, G.M.J., *see* Van der Voet, H. et al.
Mroz, G.D., *see* Zhang, Y. et al.
Nepal, S.K., *see* Somers, G.L. et al.
Pereira, J.S., *see* Tomé, M. et al.
Prentice, I.C., *see* Desanker, P.V. et al.
Reed, D.D., *see* Desanker, P.V. et al.
Reed, D.D., *see* Zhang, Y. et al.
Rennolls, K.
Pipe-model theory of stem-profile development 41
Schäfer, H. and Krieger, H.
Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand 73
Sievänen, R. and Burk, T.E.
Fitting process-based models with stand growth data: problems and experiences 145
Smith, W.R.
An empirical evaluation of a three-dimensional crown model for predicting volume growth 199
Somers, G.L. and Nepal, S.K.
Linking individual-tree and stand-level growth models 233
Steinman, J.R. and MacLean, D.A.
Predicting effects of defoliation on spruce–fir stand development: a management-oriented growth and yield model 283
Sterck, F.J., *see* Koop, H. et al.
Tomé, J.A., *see* Tomé, M. et al.
Tomé, M., Tomé, J.A., Araújo, M.C. and Pereira, J.S.
Intraspecific competition in irrigated and fertilized eucalypt plantations 211
Valentine, H.T., Ludlow, A.R. and Furnival, G.M.
Modeling crown rise in even-aged stands of Sitka spruce or loblolly pine 189
Vanclay, J.K.
Sustainable timber harvesting: simulation studies in the tropical rainforests of north Queensland 299
Van der Voet, H. and Mohren, G.M.J.
An uncertainty analysis of the process-based growth model FORGRO 157
Wenk, G.
A yield prediction model for pure and mixed stands 259
Zhang, Y., Reed, D.D., Cattelino, P.J., Gale, M.R., Jones, E.A., Liechty, H.O. and Mroz, G.D.
A process-based growth model for young red pine 21

Forest Ecology and Management, 69 (1994) 347–350
Elsevier Science B.V.

Subject Index

Adaptive stand dynamics model
Adaptable stand dynamics model integrating site-specific growth for innovative silvicultural prescriptions 245
Canopy
Light penetration through structurally complex forest canopies: an example of a lowland tropical rainforest 111
Canopy closure
Intraspecific competition in irrigated and fertilized eucalypt plantations 211
Canopy structure
Pipe-model theory of stem-profile development 41
Canopy structure model
A fractal-based *Populus* canopy structure model for the calculation of light interception 97
Carbon balance
Fitting process-based models with stand growth data: problems and experiences 145
Classification
Classifying the life-history strategies of trees on the basis of the Grimian model 167
Competition
An empirical evaluation of a three-dimensional crown model for predicting volume growth 199
Hypotheses about competition for light and water in even-aged common beach (*Fagus silvatica* L.) 219
Intraspecific competition in irrigated and fertilized eucalypt plantations 211
Computer simulation
Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand 73
Crown model
An empirical evaluation of a three-dimensional crown model for predicting volume growth 199
Crown size
Adaptable stand dynamics model integrating site-specific growth for innovative silvicultural prescriptions 245
Crown-rise model
Modeling crown rise in even-aged stands of Sitka spruce or loblolly pine 189
Decision making
HOPSY, a model to support strategic decision making in forest resource management .. 321
Dimensional analysis
An approach to developing process-oriented growth and yield models 7
Eucalypt stand
Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand 73
Eucalyptus globulus
Intraspecific competition in irrigated and fertilized eucalypt plantations 211
Fagus silvatica
Hypotheses about competition for light and water in even-aged common beech (*Fagus silvatica* L.) 219

Fertilization
Intraspecific competition in irrigated and fertilized eucalypt plantations 211
Forest growth
An uncertainty analysis of the process-based growth model FORGRO 157
Forest process model
Evaluating forest stress factors using various forest growth modeling approaches 269
Forest stress factors
Evaluating forest stress factors using various forest growth modeling approaches 269
Grimian model
Classifying the life-history strategies of trees on the basis of the Grimian model 167
Growth
Modelling daily growth and nitrogen turnover for a short-rotation forest over several years 57
Growth and yield model
A yield prediction model for pure and mixed stands 259
An approach to developing process-oriented growth and yield models 7
Development of growth models for *Pinus radiata* in New Zealand—experience with management and process models 331
Evaluating forest stress factors using various forest growth modeling approaches 269
Linking individual-tree and stand-level growth models 233
Predicting effects of defoliation on spruce–fir stand development: a management-oriented growth and yield model 283
Growth model
Sustainable timber harvesting: simulation studies in the tropical rainforests of North Queensland 299
Harvest scheduling
Sustainable timber harvesting: simulation studies in the tropical rainforests of North Queensland 299
Individual tree
Fitting process-based models with stand growth data: problems and experiences 145
Irrigation
Intraspecific competition in irrigated and fertilized eucalypt plantations 211
Latin hypercube sampling
An uncertainty analysis of the process-based growth model FORGRO 157
Life-history strategies
Classifying the life-history strategies of trees on the basis of the Grimian model 167
Light
Hypotheses about competition for light and water in even-aged common beech (*Fagus silvatica* L.) 219
Light interception
A fractal-based *Populus* canopy structure model for the calculation of light interception 97
Light penetration
Light penetration through structurally complex forest canopies: an example of a lowland tropical rainforest 111
Litter removal
Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand 73
Loblolly pine
Modeling crown rise in even-aged stands of Sitka spruce or loblolly pine 189
Marginal uncertainty contribution
An uncertainty analysis of the process-based growth model FORGRO 157

Markov model
HOPSY, a model to support strategic decision making in forest resource management .. 321
Mathematical modelling
HOPSY, a model to support strategic decision making in forest resource management .. 321
Miombo model
MIOMBO—a vegetation dynamics model for the miombo woodlands of Zambezian Africa 87
Miombo woodland
MIOMBO — a vegetation dynamics model for the miombo woodlands of Zambezian Africa 87
Mixed stand
A yield prediction model for pure and mixed stands 259
Model prediction error
An uncertainty analysis of the process-based growth model FORGRO 157
Multivariate normal distribution
An uncertainty analysis of the process-based growth model FORGRO 157
Nitrogen
Modelling daily growth and nitrogen turnover for a short-rotation forest over several years 57
Nitrogen limitation
Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand 73
Parameter estimation
Fitting process-based models with stand growth data: problems and experiences 145
Picea
Modeling crown rise in even-aged stands of Sitka spruce or loblolly pine 189
Pinus
A process-based growth model for young red pine 21
Development of growth models for *Pinus radiata* in New Zealand—experience with management and process models 331
Modeling crown rise in even-aged stands of Sitka spruce or loblolly pine 189
Pipe-model theory
Pipe-model theory of stem-profile development 41
Populus
A fractal-based *Populus* canopy structure model for the calculation of light interception 97
Process-based model
A process-based growth model for young red pine 21
Development of growth models for *Pinus radiata* in New Zealand—experience with management and process models 331
Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand 73
Protection planning
Predicting effects of defoliation on spruce–fir stand development: a management-oriented growth and yield model 283
Pure stand
A yield prediction model for pure and mixed stands 259
Rainforest
Light penetration through structurally complex forest canopies: an example of a lowland tropical rainforest 111
Red pine
A process-based growth model for young red pine 21

Short-rotation forest model
Modelling daily growth and nitrogen turnover for a short-rotation forest over several years 57
Simulation model
Simulation of multi-species tropical forest dynamics using a vertically and horizontally structured model 123
Sitka spruce
Modeling crown rise in even-aged stands of Sitka spruce or loblolly pine 189
Spruce budworm defoliation
Predicting effects of defoliation on spruce–fir stand development: a management-oriented growth and yield model 283
Stand growth model
Fitting process-based models with stand growth data: problems and experiences 145
Stem form
Pipe-model theory of stem-profile development 41
Structured model
Simulation of multi-species tropical forest dynamics using a vertically and horizontally structured model 123
Successional model
Evaluating forest stress factors using various forest growth modeling approaches 269
Survival model
An approach to developing process-oriented growth and yield models 7
Sustained yield
Sustainable timber harvesting: simulation studies in the tropical rainforests of North Queensland 299
Systems analysis
Modelling stocks and flows of carbon and nitrogen in a planted eucalypt stand 73
Thinning
A yield prediction model for pure and mixed stands 259
Timber supply
Predicting effects of defoliation on spruce–fir stand development: a management-oriented growth and yield model 283
Tree height
Adaptable stand dynamics model integrating site-specific growth for innovative silvicultural prescriptions 245
Tropical forest
Simulation of multi-species tropical forest dynamics using a vertically and horizontally structured model 123
Vegetation dynamics model
MIOMBO—a vegetation dynamics model for the miombo woodlands of Zambezian Africa 87
Volume growth
An empirical evaluation of a three-dimensional crown model for predicting volume growth 199
Water
Hypotheses about competition for light and water in even-aged common beech (*Fagus silvatica* L.) 219
Wood supply
HOPSY, a model to support strategic decision making in forest resource management .. 321
Yield estimates
Sustainable timber harvesting: simulation studies in the tropical rainforests of North Queensland 299
